#### DETAILED ACTION

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 26 27, 30, 37, 53, 56 58, are rejected under 35 U.S.C. 102(e) as being anticipated by Gusler et al (U.S. 2002/0156965).
- ♦ As per claim 26, 30, 37, 53, 56,

Gusler et al (U.S. 2002/0156965) discloses a computer system having at least first and second backup storage systems to each store backup data from at least one client (Fig. 2), comprising:

- "Receiving information related to backup activities of the second backup storage system at the first backup storage system" See Fig. 4, page 3, paragraphs 0037
   0039. In particular:
  - "First backup storage" corresponds to "backup file system 406" in client computer 402.
  - "Second backup storage" corresponds to "backup image/seed file" 414 in the server 400.

Art Unit: 2171

 "Information related to backup activities" corresponds to the backup images or data that stored in the backup file system 406.

- "A first controller ... to receive information" corresponds to the "image collection processes 412".
- ♦ As per claim 27, 57 58,
  - "Transmitting the information related to the backup activities of the second backup storage system... to the first backup storage system" See Fig. 5, paragraphs 0041 43.

# Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 2171

3. Claims 1, 3 – 8, 10 – 15, 17 – 19, 21 – 24, 28 – 29, 31 – 36, 38 – 42, 44 – 45, 47 – 51, are rejected under 35 U.S.C. 103(a) as being unpatentable over Gusler et al (U.S. 2002/0156965).

♦ As per claim 1, 7, 12, 17, 22, 40, 44, 49,

Gusler, Jr. et al (U.S. 5,799,323) discloses a computer system comprising:

- "A plurality of backup storage systems" See Fig. 4, element 406, 414, Gusler.
  - "The first backup storage system" corresponds to "backup file system 406"
     in client computer 402.
  - "The second backup storage system" corresponds to "backup image/seed file" 414 in the server 400.
- "At least one user interface, coupled to at least the first and second backup storage systems" See Fig. 1, element 104, Gusler.
- "Domain that includes at least the first and second backup storage systems and excludes the third backup storage system".

Gusler discloses in Fig. 1 including one server with corresponding clients. This schema corresponds to the "domain". In addition, Gusler also suggests that the system may include additional server, clients (Paragraph 0022). Clearly, Gusler suggests using "a third backup storage system to store backup data from at least one client".

Gusler also teaches that the workstation (or server) contains a list of nodes from which images are to be retrieved. This list is stored in the repository, which is a database of information about the various clients that the server is supporting

Art Unit: 2171

(Paragraph 0036). The Gusler may be obviously modified to support multiple domains in the following fashion:

- Gusler teaches the use of TCP/IP for the exemplary network protocol (Gusler: p.3, [0036].
- It is well known in the art that TCP/IP supports "multi-homing" e.g. locating a single machine on multiple domains.
- Therefore, it would have been obvious to one with ordinary skill in the art at the time the invention was made to situate the server of Gusler on multiple domains via the multi-homing feature of TCP/IP, said server of Gusler is able to manage clients on different domains.

Examiner further notes that multi-homing is a common practice for servers within the context of security (e.g. firewalls, portals, etc.) which reads on the practice stated in the pending application.

- ♦ As per claim 28 29, 31 32, 38 39, 8, 10, 13 15, 18 19, 21, 23 24, 41 42, 45, 47 48, 50 51,
  - The Gusler server can be situating on multiple domains via the multi-homing feature of TCP/IP, which includes a different client with respective backup storage. This client corresponds to the third backup storage system.
  - The multi-homing is a common practice for servers within the context of security
     (e.g. firewalls, portals, etc.), in which only system in the same domain can see
     data or receive data each other and cannot see or receive other data from
     different domain.

Art Unit: 2171

 $\diamond$  As per claim 33 – 36, 3 – 6,

As discussed above, the Gusler server can be situating on multiple domains via the multi-homing feature of TCP/IP, which included a different client with respective backup storage. However, the domain that's not include this client can be acted as domain master and is used to stored client identifiers (paragraph 0036)

- "The domain master stores at least one second identifier ... one domain" See Fig. 1.
- "A second controller" corresponds to the components in the backup processes 404 of Fig. 1.
- "The domain master authorizes each controller to transmit the information... only within one domain (See Fig.5).
- ♦ As per claim 11,

Claim 11 is rejected based on the rejection of claims 1.3 - 6.

4. Claims 54 - 55 rejected under 35 U.S.C. 103(a) as being unpatentable over Gusler et al (U.S. 2002/0156965) in view of Logan et al (U.S. 5,968,121).

Gusler does not clearly teach that the system will determine a lapsing time period to automatically generating the report. However, Logan discloses a method for replicating a resource. Logan teaches that the object may include replication-scheduling properties, which specifies the frequency with which applications will poll other sites for changed information (col. 9, lines 40 - 51). It would have been obvious to one with ordinary skill in the art at the time the invention was made to apply the teaching of

Art Unit: 2171

Logan into the system of Gusler, because the combination would reduced the inconsistency between sites by backup regularly.

## Response to Arguments

5. Applicant's arguments with respect to claims 1, 3 – 8, 10 – 15, 17 – 24, 26 – 42, 44 – 45, 47 – 51, 53 - 56 have been considered but are moot in view of the new ground(s) of rejection.

### Conclusion

- 6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
  - John P. Shannon (U.S. 5,852,713) discloses a computer data file backup system.
  - Mathew Joseph Anglin (U.S. 6,026,414) discloses a system including a proxy client to backup files in a distributed computing environment.
  - Yanai et al (U.S. 6,647,474) discloses a remote data mirroring system using local and remote write pending indicators.
  - Thurman et al (U.S. 5,613,106) discloses a method for processing and storing a transaction in a distributed database system.
  - Hsiao et al (U.S. 6,564,215) discloses an update support in database content management.
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to CamLinh Nguyen whose telephone number is 305-1951. The examiner can normally be reached on Monday Friday from 8:00 am to 4:30 pm.

Art Unit: 2171

Page 8

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Safet Metjahic, can be reached on (703) 308- 1436. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 305-3900.
